

IQ ULTRA is a dual purpose, high quality dry erase whiteboard surface with ultrasonic technology to give it interactive capability.

The porcelain whiteboard surface is a new, special purpose low glare projection surface, designed for interactive use.

It combines the advantages of both whiteboard uses, and is supplied with the IQ Interactive Board software.

The electronic pens can be used to operate and control the computer functions rather than using a mouse.

This requires a data projector to project the PC image onto the whiteboard surface so that the PC image and controls are visible to enable accurate control.
